Summary

Senior Infrastructure Engineer with 7+ years of experience across identity, cloud platforms, and environment design — built entirely through hands-on work across dozens of client environments. Background in MSP means deep exposure to complexity, variety, and operational pressure that most internal engineers never encounter. Current title is Director-level, but the day-to-day remains entirely hands-on — designing and building, not just overseeing. Focused on bringing that operational depth into an environment where infrastructure is managed as code, automation is the default, and IT is treated as a platform, not a support function.

Experience

Diligex — Director, Projects & Implementation

Jan 2026 – Present | Remote

- Promoted to Director while remaining the sole hands-on technical executor — owning architecture, implementation, and delivery end to end across all infrastructure projects.
- Contribute technical direction to company strategy and operational roadmap at the executive level while continuing to design and build directly.
- Introduced repeatable project workflows and delivery standards that reduced execution overhead across concurrent client engagements.

Diligex — Senior Systems Engineer

Oct 2022 – Dec 2025 | Remote

- Architected and deployed 30+ Microsoft 365 and Google Workspace tenant environments, including tenant-to-tenant migrations, Exchange to M365 migrations, and full local AD to Azure AD transitions with profile migration via ProfWiz.
- Owned Conditional Access policy design across client environments — including MFA enforcement on compliant devices, geo-blocking, and enterprise app SSO integrations via Entra ID.
- Built and deployed Azure infrastructure across client environments including VNets, VMs, gateways, private DNS resolvers, Azure Files, and storage accounts with SFTP layers.
- Developed onboarding automation using device management and RMM tooling, reducing L1 technician hands-on time to 30–40 minutes per deployment across major clients.
- FileVault Compliance Automation: Continuous macOS compliance automation using Addigy Flex Policies — automatically detecting and remediating both disabled FileVault and missing key escrow across managed fleets, with zero technician involvement.
- Production Monitoring & Alert Routing: Proactive, site-aware ISP monitoring pipeline across 15–20 client sites — structured alert naming drives automatic ticket creation, SLA routing, and on-call paging with zero manual handling.
- Offboarding Automation: Interactive PowerShell script guiding L1 technicians through a complete M365 offboard — cutting 1.5 hours of manual work down to 15 minutes.
- Conducted NIST-based Security Risk Assessments across client organizations, producing scored evaluations and phased remediation plans; led rollouts across DLP, ITDR, PAM, and SaaS backup/recovery solutions.
- Built reusable deployment templates and MDM workflows to standardize future implementations and reduce engineer ramp-up time.
- Maintained formal on-call rotation throughout tenure, providing after-hours support across client infrastructure and cloud environments.

Diligex — IT Systems Engineer

Nov 2020 – Oct 2022 | Hybrid – New York, NY

- Supported and administered cloud environments across Microsoft 365 and Google Workspace, including identity systems, device management, and end-user infrastructure across diverse client organizations.

- Began taking on independent project ownership — leading portions of deployments and implementations including cloud tenant setup, identity integrations, and MDM rollouts as trust and scope increased.
- Contributed to security and endpoint initiatives including MFA rollouts, device encryption, and user security awareness programs alongside senior engineering staff.
- Participated in formal on-call rotation, supporting production environments and developing strong troubleshooting fundamentals across infrastructure and cloud platforms.
- Built and maintained technical documentation including runbooks, environment diagrams, and configuration records to support operational consistency.

Diligex — IT Technician

Nov 2019 – Nov 2020 | Onsite – New York, NY

- Provided hands-on support across endpoints, infrastructure, and user environments while contributing to system deployments, onboarding, and cloud platform administration including Microsoft 365 and hosted services.
- Built foundational skills in troubleshooting, system configuration, and technical documentation across diverse client environments.

Dynamic Business Systems — IT Support Specialist

Oct 2018 – Nov 2019 | Onsite – New York, NY

- Provided technical support across enterprise and mid-sized environments, working across Windows and macOS endpoints, business applications, and user infrastructure.
- Gained early exposure to identity and access management through user provisioning, application environments, and system administration tasks.

RDS Team — Technical Support & Implementation Specialist

Oct 2017 – Sep 2018 | Onsite – Miami, FL

- Delivered technical support and configuration services across client environments including endpoints, document systems, and POS hardware — first role with hands-on IT implementation experience.
- Supported cloud-connected and on-prem system deployments, building foundational skills in field implementation and system integration.

Skills

Identity & Access Management — Entra ID (Azure AD), Conditional Access, SSO, RBAC, MFA, BYOD & app protection policies

Cloud Platforms — Microsoft 365, Azure (VNETs, VMs, Storage, Private DNS, Azure Files), Google Workspace

Device & Endpoint Management — Intune, Addigy (certified), MDM, macOS & Windows fleet management

Security — NIST Risk Assessments, Zero Trust, DLP (Microsoft Purview), ITDR, PAM, email security

Automation & Scripting — PowerShell, Bash, Git/GitHub, RMM/MDM Automation, Workflow Design

Infrastructure — Systems Architecture, Migrations, Environment Standardization, Networking (Meraki certified)

Certifications

Microsoft 365 Endpoint Administrator (2020) | Cisco Meraki CMNA (2021) | Addigy ACE (2024)

Portfolio

Automation projects and implementation documentation available at neilchvz.github.io/infrastructure-portfolio

FileVault Compliance Automation — Continuous macOS compliance automation using Addigy Flex Policies, automatically detecting and remediating disabled FileVault and missing key escrow with zero technician involvement.

Production Monitoring & Alert Routing — Proactive, site-aware ISP monitoring pipeline across 15–20 client sites. Structured alert naming drives automatic ticket creation, SLA routing, and on-call paging with zero manual handling.

Offboarding Automation — Interactive PowerShell script guiding L1 technicians through a complete M365 offboard, cutting 1.5 hours of manual work down to 15 minutes.
